SKILLS SUMMARY

- Project Management
- Web Development
- Front End Development

PROGRAMMING SKILL

- Javascript
- PHP
- C++
- HTML
- CSS

FRAMEWORKS SKILL

- Code Igniter
- Laravel
- Vue Js
- React Js
- Vuetify ,Bootstraps, JQuery

COMMUNITY

1. Praxis Academy
2. Information Technology Club
3. Multimedia Community

ADRIAN FATHUR SETYAWAN

SOFTWARE ENGINEER

PERSONAL PROFILE

I am a young developer who focuses on software development. I also have enthusiasm to learn new technologies that are developing related to software development

PROJECT EXPERIENCE

Front End Developer

Matador Tracker | September 2021 - November 2021

- Adding rental features to the website such as cart lists, tables for managing vehicle orders and online payments using a third party, namely midtrans
- Bug fixing from previous sprint

Front End Developer

Yamaha Crack Detection Dashboard | September 2022-Desember 2022

- Create a dashboard for inspection of manufactured parts
- Using websocket for get responsive/realtime data from backend
- Integrate data and consume api from backend

Front End Developer

Be-Well Admin | Maret 2023 - Now

- Create dashboard for appointment between patient and doctors, treatment packages and prices, and print payment invoices on this bewell admin website.
- Add new feature like notification using push notification
- Bug fixing from previous sprint

Front End Developer

Port Digitalisasi | September 2023 - July 2024

- Create a dashboard monitoring for hauling, plan and actual barging activity. The data in this dashboard is displayed in graphic or table form.
- Integrate data and consume api from backend

EDUCATIONAL HISTORY

Graduated at UPN 'Veteran' Yogyakarta

Informatic's Engineering | 2017 - 2022

SMA NEGERI 2 YOGYAKARTA

IPA | 2014 - 2017

ADRIAN FATHUR SETYAWAN

• Software Engineer •

ABOUT ME

I am a young developer who focuses on software development. I also have enthusiasm to learn new technologies that are developing related to software development

EDUCATION

2014 - 2017 • SMA N 2 Yogyakarta
2017 - 2022 • Graduate at UPN 'Veteran' Yogyakarta
2021 - Now • Praxis Academy (Coding School)

SKILLS

Manage Project 
Web Development 
Front End Development 

WORK AT

2021- 2023 • Widya Analytic (Indonesia)
2022 - Now • ExcelFixer (Malaysia)
2023 - Now • GSI (Indonesia)

PROGRAMMING LANGUAGE SKILLS

- JavaScript.
- PHP.
- C++.
- HTML,CSS.

EXPERIENCE USING FRAMEWORKS

- Vue Js.
- Code Igniter.
- Bootstrap.
- JQuery.
- Laravel.
- Vuetify.
- React Js.

ORGANIZATIONAL / COMMUNITY EXPERIENCE

- **Multimedia Community(2018-2019)**
Staff Videography
- **Information Technology Club (2019-2020)**
Staff Android Development

THESIS

- **Optimasi Parameter Triple Exponential Smoothing Menggunakan Algoritma GSSMV dan Algoritma Genetika Untuk Penentuan Best Forecasting Optimization Model dan Prediksi Jumlah Penumpang Kereta Api**

EXPERIENCE PROJECT

Sistem Informasi Inventaris Barang Sekolah Teladan (Des 2019 – Feb 2020) (Internship)

Web Developer

- Designing a database system.
- Creating a website appearance and website layout using a base template.
- Testing Website Performance.

Link Proyek : <http://ysinventaris.epizy.com/>

NCF Website (Jun 2020)(small project)

Web Developer

- NCF calculation is very important to use in building, running and deciding whether the project is worth continuing or not. This made me motivated to build the NCF calculate website to calculate NCF with two choices of methods, namely Straight Line and Declining Balance. In addition, this project is also devoted to oil projects or oil companies.

Link Proyek : <http://www.projectperminyakan.epizy.com/>

Crast FM Website (Jul 2020 – Agu 2020)(freelancer)

Project Manager and Front End Developer

- Meet with the client to discuss the website project that will be made, especially the required features.
- Create a base template design to be implemented into the Crast FM project interface.
- Coordinating the deadline for the work done by the team to build a Crast FM website.
- Estimating the costs needed to build a website

Link Proyek : <http://www.crastfm.com/>

HimaTricaka Website (Oct 2020 – Dec 2020)(freelancer)

This website project is a project created for the official website of the Association of Architects at Atma Jaya University, Yogyakarta. This website was built with the aim that the information held by the association can be accessed by students through this website. This website was built using the Code Igniter framework and bootstraps

Front End Developer

- Create a base template design to be implemented into the HimaTricaka project interface.
- Design the appearance of the features required by the client

Link Proyek : <https://www.himatricaka.com/>

KodrekFilm (Nov 2020 – Jan 2021)(small project)

This project is the result of me learning a udemy class with basic vue js topics. This project is the first project I'm working on using vue js

Front End Developer

- Create base template using vue js .
- Using vuex to manage state management.
- Deploying website to testing website performance.

Link Proyek : <https://kodrek-film.herokuapp.com/>

Gamabox Explorer (April 2021 – Juni 2021)

I got the project from PT Widya analytical, where it was the first place where I worked as a freelancer and was trusted to be a front end developer. In addition, this project was also the first time I actually worked as a team directly with the backend and project manager to improve the website that had been worked on in the previous sprint. Unfortunately, this website link is not shared to the public because it is a company secret

Front End Developer

- Overhaul the designs that have been worked on in the previous sprint
- Optimize data loading of large shp extension file coordinates in terms of front end development
- Consume rest api from backend.
- Using Vue Js and laravel to build this project

Wisata Book Website (8 Juli 2021 – 10 Juli 2021) (small project)

I created this project to complete the criteria as a front end developer in the field of front end developer. I created this project using vue js and for the data in it I consume the api created by the backend

Front End Developer

- Build interface website and consume api from backend.
- responsive website is an important point in working on this project

Link : <https://wisatabookadrianfs.herokuapp.com>

Matador-Tracker (September 2021 – November 2021)(at widya analytic)

Matador tracker is a website market place and rental of a vehicle, both in large and limited quantities from several organizations that are clients of the matador tracker. In this matador tracker there is a feature to track a vehicle whose coordinates are updated in real time and implemented in the form of a travel map of a vehicle. In addition, this website has a cart list feature like a marketplace in general, so that website users can save a shopping list before making a payment. In this project I help in the field of front end developers to develop the website. Unfortunately, this website link is not shared to the public because it is a company secret

Front End Developer

- Adding rental features to the website such as cart lists, tables for managing vehicle orders and online payments using a third party, namely midtrans
- Implement the design of ui/ux and integrate with the end point of the backend
- Consume endpoint api from backend.
- Using Vue Js to build this project
- Bug fixing from previous sprint

Folderlink (July 2022 – Agustus 2022)(at widya analytic)

Folderlink is a website that was built and developed to store, manage files owned by the company, besides that this website can also be used for sharing files between office employees making it easier for employees to transfer files urgently.

Front End Developer

- Consume data from backend
- Implement the design of ui/ux and integrate with the end point of the backend
- Using React js for build this website
- Bug fixing from previous sprint

Yamaha Crack Detection Dashboard (September 2022 – Desember 2022)(at widya analytic) ~Best Ever Project Done

Yamaha crack detection dashboard is a dashboard in the form of a website that is used to display product data that has been scanned by Yamaha's robot in an informative manner. In addition to displaying product data that has been scanned, this website also has a feature for scanning products from product barcodes, product image captures to the process of scanning crack results from a Yamaha product. This website was built using React JS and WebSocket so that this website can be responsive in capturing data provided by the backend

Front End Developer

- Consume data from backend
- Implement the design of ui/ux and integrate with the end point of the backend
- Using React js for build this website
- Using websocket for get responsive data from backend
- Create base template for developing in frontend

Creativer (July 2022 – Desember 2022)(at Excelfixer)

Creativer is a website for freelancers to get jobs or projects, but another function of this website is also for vendors to post their projects and need resources to help them complete their projects. Creativer also has a vendor feature for booking freelancers, and has a real chat feature for the two of you to discuss projects. The Creativer website also provides paid features, if vendors want freelancers to join their projects

Front End Developer

- Consume data from backend
- Using Vue js for build this website
- Using pusher for handle feature chat
- Set base template how to call endpoint from backend o frontend template

Link: <https://creativer.my>

Funsco.com (November 2022 – February 2023)(at ExcelFixer)

Funsco is a marketplace for Malaysians to buy burgers, drinks, mini burgers and snacks. The funsco website is like a little gojek version. funsco has a service to deliver orders to customers who order on this website. This website design can be mobile friendly and desktop display too. another feature is the add to cart feature. users can take what food they want and enter the basket feature and users can pay for this food if the user wants to order the food he ordered.

Front End Developer

- Consume data from backend
- Implement the design of ui/ux and integrate with the end point of the backend
- Using Vuejs for build this website
- Bug fixing from previous sprint
- Using pusher for handle realtime order
- Bug fixing from previous sprint

Link: www.funsco.com

Be-Well Admin (Maret 2023 – September 2023) (at ExcelFixer)

Bewell Admin is a website that is used to manage scheduling between doctors and patients, treatment packages and prices, and print payment invoices on this bewell admin website. This website is also equipped with a real-time notification queue feature using Laravel and Vue pusher technology so that when a patient arrives, the admin will broadcast the message in real time to the doctor concerned.

Front End Developer

- Consume data from backend
- Implement the design of ui/ux and integrate with the end point of the backend
- Using Vuejs for build this website
- Add new feature like notification using push notification
- Bug fixing from previous sprint

Link: <https://be-well.com.my>

Port Digitalisasi (September 2023 – Maret 2025) (at Turangga Resources)

The digitalization port is a monitoring dashboard that has the function of displaying data so that the data can be used as a reference for monitoring hauling and barging activities. This digitization port is in the form of a website that presents data in the form of graphs and tables. Apart from that, the website has a graph and table export feature, making it easier for those carrying out activities to create data reports.

Front End Developer

- Consume data from backend
- Implement the design of ui/ux and integrate with the end point of the backend
- Using Reactjs for build this website

Device Management (Juni 2025 – September 2025) (at PT Putra Perkasa Abadi)

Device Management is a platform for maintaining and tracking device inventory history. It records the complete lifecycle of a device, starting from production, distribution, installation, and up to maintenance activities. All processes and data inputs are managed by administrators through a centralized system.

Front End Developer

- Consume data and integrate api from backend
- Using next js for develop this website

Fleet Management System (OFA) (November 2025 – Januari 2026) (at PT Star Perkasa Technology)

OFA (Onboard Fleetsafe Assist) is a platform designed to manage and optimize the fleet operations of haulers and loaders to ensure efficient production. The system provides real-time monitoring of haulers, graders, and loaders through an actual operational map supplied by the dispatch team, enabling better coordination and decision-making.

Front End Developer

- Consumed and integrated APIs provided by the backend services.
- Integrated real-time CCTV feeds from field units into the system.
- Implemented two-lane road visualization on the main operational map.
- Developed 3D unit animations using Three.js to visualize equipment movement and status.

ACHIEVEMENT

- **Beasiswa Prodia (2014) - Laboratorium Klinik Prodia**

Second Place Winner for Junior High School Achievement Student Scholarship Program
